

Ultimate simplicity with TRI Dental Implants

The latest innovations from Swiss implant manufacturer, *TRI Dental Implants*

Swiss implant manufacturer TRI® Dental Implants is proud to present its latest innovations simplifying implantology even further with the aim for "ultimate simplicity". Starting from its revolutionary handling concept TRI® Pod to a full range of unique abutments as well as its novel TRI® Digital Services.

TRI® Pod

The touchless concept of TRI® Pod combines simplicity with innovative design. This revolutionary concept allows to pick-up the implant directly with the surgical hand-piece in one single step, thereby ensuring that the TRI® SBA surface remains untouched and the workflow is optimised.

The implant can be inserted in one of three ways: with a ratchet, with the surgical handpiece, or by hand.

TRI® Digital Services

TRI®+ Digital Solutions guarantees a universal implant open interface to leading technology partners in digital dentistry.

In contrast to numerous locked digital systems, TRI® helps create more transparency and eliminates all barriers for their respective treatments. TRI®+ Digital Solutions allows a wide range of indications via 3D planning, guided surgery, CAD abutments, CAD/CAM screw-retained and cement-retained restorations or modern treatments such as 'All-on-TRI' procedures. Linked with the lean and intelligent dental implant system of TRI®, treatment options from simple to complex without limits has never been easier.

The new TRI®+ Digital portfolio contains the new TRI®-Bases both in an engaging and non-engaging version, milling blanks including the proprietary TRI® Friction Fit, multi-unit Ti-bases and a new and innovative digital implant analogue. To meet all specific aesthetic requirements, all TRI®-Bases can be customised in order to be used with the new angulated screw driver.

TRI® 2in1 abutment

The TRI® 2in1 impression abutment is a revolutionary instrument-free innovation for closed-tray impression taking and final abutment restorations. The patented integrated solution

guarantees an entire new level of precision and simplicity during the impression and restorative process. And best of all: you get two products in one!

TRI® Raptor overenture attachment system

TRI® Raptor abutment range is the newest line of low profile direct implant overenture attachments. With a low vertical profile of 2.1mm and diameter of 4.4mm it is the smallest attachment system on the market.

This system offers multiple solutions for overenture treatment planning when vertical space limitations are a consideration.

As with every TRI® innovation, it is always the goal to streamline the process as much as possible and at the same time, improve product performance in the hands of practitioners.

True design innovations and ultimate simplicity which will take the surgical performance to a new level, 100% designed and manufactured in Switzerland.
